SUMMARY

Senior Frontend Engineer with Backend Expertise and 4+ years building scalable commerce applications with React, Next.js (App Router, Server Components, SSR/SSG/ISR), and TypeScript. Contributed to a marketplace serving 300K+ active users and 40K+ live listings, improving Core Web Vitals (LCP 4.2s to 2.6s, INP 382ms to 156ms), cutting initial JavaScript from 285KB to 88KB, and achieving a 92+ Lighthouse score. Experienced in design systems (Radix UI, shadcn/ui, Storybook) and accessibility. Also contribute across the full stack with Node.js, NestJS, Python, FastAPI, GraphQL, REST APIs, Redis, PostgreSQL, AWS, and production AI features. Built RAG-based conversational search and agent workflows using LangChain, Google Gemini, OpenAI, Qdrant, and Redis.

TECHNICAL SKILLS

Frontend: JavaScript · TypeScript · React · Next.js (App Router, RSC, SSR, SSG, ISR) · Tailwind CSS · HTML5 · CSS3 · Responsive Design

Architecture & State: TanStack Query · Zustand · Redux Toolkit · React Hook Form · Zod · GraphQL · REST APIs

Design Systems & Accessibility: shadcn/ui · Radix UI · Storybook · Component Libraries · WCAG · ARIA · Semantic HTML

Performance: Core Web Vitals (LCP, INP, CLS, FCP) · Lighthouse · Bundle Analyzer · Code Splitting · Lazy Loading · Image Optimization · Performance Profiling

Backend & AI: Node.js · Express.js · LangChain · RAG · Qdrant · Google Gemini · OpenAI

Databases: PostgreSQL · Redis · Supabase

Testing: Jest · React Testing Library · Playwright · Cypress · Vitest

Platform: CI/CD · GitHub Actions · Docker · Docker Compose · Git · Sentry · AWS

AI-Assisted Development: Cursor · GitHub Copilot · Claude Code

EXPERIENCE

TechBazaar.pk · Frontend Engineer *Sep 2022 – Present*

Build and ship customer-facing commerce products and AI-powered discovery experiences across frontend, backend integration, testing, and production delivery.

AI Search & RAG Pipeline Engineer | TechVault AI

- Engineered an end-to-end AI-powered search and RAG backend using FastAPI and LangChain (LCEL), converting unstructured buyer queries into grounded product recommendations and structured JSON payloads.
- Implemented zero-shot intent extraction using Google Gemini and Pydantic v2 schemas to parse natural-language search constraints (brand, price ceilings, stock status, category) prior to retrieval.
- Eliminated external embedding costs and rate limits by deploying local 384-dimensional HuggingFace embeddings (BAAI/bge-small-en-v1.5) running on CPU.
- Configured hybrid metadata-filtered vector search in Qdrant, combining semantic cosine similarity with strict SQL-like payload filters for precise catalog matching.
- Architected a resilient multi-model fallback chain (gemini-flash-lite, falling back to gemini-flash) to ensure continuous service during API throttling or quota exhaustion.
- Built an incremental, checkpointed batch ingestion pipeline synchronizing catalog listings from PostgreSQL (SQLModel) into Qdrant, avoiding redundant re-embedding.
- Containerized infrastructure with Docker Compose, managing PostgreSQL, Qdrant, and Redis caching.

Stack: *Python · FastAPI · LangChain · Qdrant · Google Gemini · PostgreSQL · Docker*

Marketplace Platform

- Built responsive product discovery, cart, checkout, payment, and order flows for a marketplace serving 300K+ active users and 40K+ live listings.
- Architected reusable server/client and desktop/mobile modules with Next.js App Router, React Server Components, SSR/SSG/ISR, TypeScript, Axios, TanStack Query, and Zustand.
- Improved Core Web Vitals: LCP 4.2s to 2.6s, INP 382ms to 156ms, CLS 1.08 to 0.3, with 0.5s FCP, reaching a 92+ Google Lighthouse performance score.
- Reduced initial JavaScript load from 285KB to 88KB using Next.js Bundle Analyzer, dynamic imports, code splitting, lazy loading, and image optimization.
- Built reusable component libraries and design-system patterns with Radix UI, shadcn/ui, and Storybook.
- Maintained accessibility (WCAG practices, semantic HTML, ARIA) with accessibility scores above 80 across all applications.
- Monitored production errors and logs with Sentry to detect and resolve issues quickly.

AI Shopping Assistant

- Implemented an OpenAI Assistants API agent with tool calling for search, comparison, stock checks, and recommendations across a Next.js chat interface and NestJS service.
- Designed a conversational experience that gathers budget, category, brand, and use-case requirements before returning relevant catalog results, with voice input via Web Speech API.

Point of Sale System

- Developed sales, purchasing, inventory, transaction-history, and operational reporting workflows for a web-based POS system.

U2Ventures Pvt Ltd. · Frontend Developer *Jan 2022 – Sep 2022*

- Built the company website frontend in React from the ground up, establishing reusable component and state-management patterns.
- Created shared UI libraries and API integration layers for React applications backed by Django and Express.
- Delivered responsive interfaces for E-Agrimarket and Finqalab, including market dashboards, filtering, and investor-account onboarding workflows.

UltraCodes · Frontend Engineer (Contract)

Pixels Galaxy — pixelsgalaxy.com

- An online commerce storefront for customers in Pakistan, focused on reliable cash-on-delivery ordering and a fast shopping experience.
- Built cart, checkout, server-authoritative PKR price validation, Supabase order management, protected administration, Resend notifications, SEO, and Vitest coverage.
- Implemented defensive order handling with expected-total and catalogue-revision checks so the server remains authoritative during checkout.
- Set up CI/CD and deployed on AWS Amplify with a custom domain served through CloudFront.
  Stack: *Next.js · React · TypeScript · Supabase · Zod · Resend · Vitest · AWS Amplify · CloudFront*

Gatekeeper (HEPTA)

- A role-aware attendance and safety foundation for schools and organizations, designed across mobile and web experiences.
- Built welcome, sign-in, password recovery, role previews, protected kiosk-demo boundaries, mock repositories, and secure session-token storage, with GraphQL API integration.
- Implemented the mobile foundation with Expo Router and React Native while the web app uses protected routes and a clear authentication boundary.
  Stack: *Next.js · React Native · Expo · TypeScript · GraphQL · TanStack Query · Zustand · Radix UI*

PULSE — Punjab Urban Land Systems Enhancement

- A World Bank-funded, $150M Government of Punjab initiative (2022–2027) to digitize, map, and unify land and property records across the province, delivered with the Board of Revenue and Punjab Land Records Authority.
- Built the Angular dashboard that calculates and presents registered land khewat data, used to review land holdings and support transparent, fraud-resistant ownership records.
- Delivered production frontend features as part of an outsourced UltraCodes team, integrating with backend services for a government-scale system.
  Stack: *Angular · TypeScript · REST APIs*

CERTIFICATIONS & COURSES

- LLM Core Certificate — Hugging Face
- JavaScript — freeCodeCamp
- JavaScript: The Hard Parts — Frontend Masters
- Next.js — Frontend Masters

EDUCATION

Government College University (GCU) · Bachelor's in Computer Science *Nov 2017 – Sep 2021*

Relevant coursework: Data Structures & Algorithms, OOP, OOAD, Databases, Web Engineering, Software Engineering, Operating Systems, Compiler Construction.
