SUMMARY

4+ years experience as a Frontend Engineer specializing in architecture and development of scalable web applications. Skilled in designing modular component hierarchies, implementing state management solutions, and creating reusable UI libraries. Recently expanded into full-stack AI development — built and shipped a production RAG-based conversational search system and AI agent pipeline using NestJS, OpenAI, and vector databases.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript · TypeScript · React.js · Next.js · Angular · NestJS · Tailwind CSS

AI & ML: OpenAI API · RAG Architecture · Vector Embeddings · Qdrant · LLM Tool Calling · AI Agents · MCP Servers

Backend & Data: Node.js · MicroORM · Redis · REST APIs

Tools: Git · GitHub · VS Code · Postman · Firebase · Docker

Testing: Jest · React Testing Library · Cypress · Playwright

Currently Learning: React Native · AI Agents for Workflow Automation · LLM · RAG

PROFESSIONAL EXPERIENCE

U2Ventures Pvt Ltd. | [Frontend Developer](#) | Jan 2022 – Sept 2022

- Architected and implemented the company website frontend using React.js from scratch, establishing component structure and state management patterns.
- Designed and developed reusable component libraries for multiple projects, ensuring consistency and reducing development time.
- Created robust API integration layers connecting React frontends with Django and Express backends.
- Implemented responsive design systems that maintain performance across desktop and mobile devices.

► **E-Agrimarket**

- Engineered a responsive online trading platform for agriculture stakeholders using modern frontend frameworks.
- Implemented real-time market insights dashboard and intuitive product exploration with advanced filtering.

► **Finqalab**

- Platform for opening Investor Portfolio Securities Accounts (IPS) through National Clearing Company of Pakistan Limited.

[TechBazaar.pk](#) | [Frontend Engineer](#) | Sept 2022 – Present

Built and shipped a full AI-powered product discovery system on a live e-commerce platform (techbazaar.pk) — covering the complete pipeline from vector embeddings to production deployment.

- ► **Marketplace Platform**
- Built a responsive marketplace platform with Next.js, React, TypeScript, and Tailwind CSS, connecting verified tech retailers with customers through product discovery, cart, checkout, payment, and order flows — now serving 300K+ active users with 40K+ live product listings.
- Architected the system with server and client components and reusable desktop/mobile modules, integrating REST APIs via Axios and React Query, achieving a 92+ Google Lighthouse performance score through optimized rendering and code-splitting.
- Managed shared state with Zustand and structured the application into scalable services for authentication, listings, users, and transactions.

► POS System

- Developed a web-based Point of Sale (POS) system for managing sales, purchases, and inventory transactions.
- Built comprehensive reporting modules to track transaction history and overall business performance.
- Designed an intuitive interface enabling fast and accurate transaction record management.

► AI Shopping Assistant

- Implemented an AI Agent using the OpenAI Assistants API with tool calling for autonomous multi-step reasoning (search → compare → check stock → recommend), integrated via a Next.js floating chat widget (Zustand + React Query) → NestJS microservice → Qdrant → MySQL, with voice input support via Web Speech API.
- Designed a conversational AI chat experience that asks clarifying questions to understand exactly what the user needs (budget, category, brand, use case), searches across the entire product catalog, and returns the most relevant, desirable product matches in real time.

PROJECTS

► Land Management System

- Architected a comprehensive land management system using Angular with modular component design and efficient state management.
- Engineered complex form validation systems with dynamic conditional logic for land registration workflows.
- Designed interactive dashboards with data visualization for administrators.

► Sports Management System (FYP)

- University sports management system with player records, tournament/team management, fixture generation, gallery, equipment records, and blog.

EDUCATION

Government College University (GCU) | **Bachelor's in Computer Science** | Nov 2017 – Sep 2021

- Relevant coursework: Data Structures & Algorithms, OOP, OOAD, Databases, Web Engineering, Software Engineering, Operating Systems, Compiler Construction.
